Re: Effort to get MRID numbers assigned oyster imidacloprid studies
 88867-R & 88867-E

Teresa,

We are submitting the following studies

- 49128601** 1. Appendix A: Field Trials of imidacloprid against burrowing shrimp, 2011
- 49128602** 2. Concentrations of Imidacloprid in Sediment Pore Water Following Application of Imidacloprid in Willapa Bay, Washington- 2010
- 49128603** 3. Effects of Freezing and HDPE Plastic on Imidacloprid Concentrations within Sediment Samples Collected in Willapa Bay, Washington
- 49128604** 4. Use of an Enzyme-linked Immunosorbent Assay (ELISA) to Quantify Imidacloprid in Sediment Pore Water Following Application of Imidacloprid in Willapa Bay, Washington- Matrix Effects and Cross-reactivity
- 49128605** 5. Impact of Imidacloprid on epi-benthic and benthic invertebrates: 2011 studies to describe the Sediment Impact Zone (SIZ) related to imidacloprid treatments to manage burrowing shrimp: Preliminary results from one of two study sites and three of five sample dates.
- 49128606** 6. Quantification of Imidacloprid in Green Sturgeon Plasma and Burrowing Shrimp

These studies are in support of an effort by the Willapa Grays Harbor Oyster Growers Association to obtain registrations for imidacloprid with the names of Protector 0.5G (88867-R) and Protector 2F (88867-E.) The studies have been slightly reformatted so that they are eligible to be assigned MRID #s. For example, each study was given a Transmittal Document cover page, EPA required Title Page, a confidentiality page, GLP statement and so on.

Based on feedback from you and Jennifer Urbanski, we believe that these studies are not eligible to be assigned MRID#s, which are needed in order for our registration processing to be completed.

If you have any questions, please call or email me at 509 266 4348 or at aschreib@centurytel.net. If I am not available, please ask for Jon.
